The scope of work is RBI for **vessels** on FPU-DH01, WHP-DH01, WHP-DH02 after internally inspected in April, 2025 to provide the schedule for the next plan internal inspection in the normal operation condition of these vessels.

I GENERAL INFORMATION

I.1. Production facilities

The Dai Hung oilfield is located offshore Vietnam, approximately 250 km from Vung Tau city, at a water depth of approximately 110 meters.

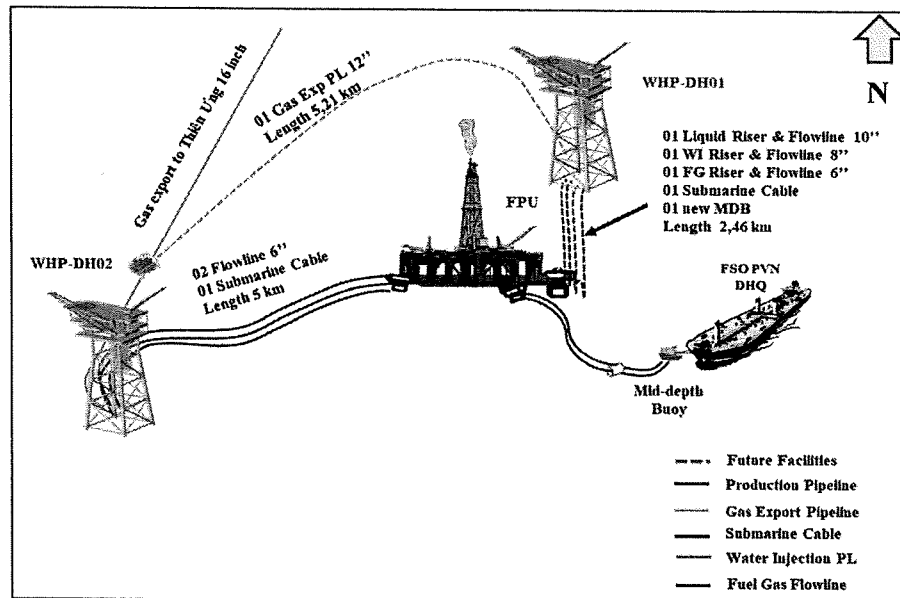

Product from subsea wells, WHP-DH02, WHP-DH01 flow to FPU DH01 for processing.

Crude oil is stabilized on the FPU-DH01 and offloaded to the Floating Storage and Offloading Vessel (FSO) which is moored to the Catenary Anchor Leg Mooring (CALM) buoy. Crude oil can be transferred to the CALM buoy by two dedicated 150 mm NB subsea flowlines, and then from the CALM buoy to the FSO PVN Dai Hung Queen by means of a 150 mm NB floating hose.

The fixed WHP-DH02 was F.O in August 2011, located in South West direction of FPU-DH01 with distance of approximate 5km. WHP-DH02 is based on an unmanned wellhead platform located over a drilling template with 12 slots. The platform was tied back to and remotely operated from the FPU-DH01. Two 6" flowlines were used to transport liquids from the WHP-DH02 to the FPU-DH01. WHP-DH02 is controlled and supplied energy from FPU-DH01 by a submarine cable.

The fixed WHP-DH01 was F.O in May 2025 with distance to FPU-DH01 approximate 2,46km. WHP-DH01 is based on an unmanned wellhead platform located over a drilling template with 12 slots. The platform was tied in to and remotely operated from the FPU-DH01. One 10" flowline was used to transport liquids from the WHP-DH01 to the FPU-DH01. WHP-DH01 is controlled and supplied energy from FPU-DH01 by a submarine cable.

Gas from WHP-DH01, WHP-DH02 were transferred to BK-TNG (Thien Ung Field belong to VSP) by 20 km 16" pipeline, then gas compressed by compressor from 6 -10 bar to 23 - 30bar exporting to Sao Vang – Dai Nguyet, then compressed to 125 bar and to shore.
